### DETAILED ACTION

1. Claim 1 is rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Hoshino et al (JP 3-340774).

Hoshino discloses a mixture of inorganic pigment such as  $\text{CaCO}_3$  and hollow emulsion polymer particles having a bimodal size distribution. The polymer particles are ideally present in an amount of between 3-30% by weight of the pigment (pages 6 and 7 of the translation). The diameter of the hollow polymer particle is between 0.3 to 5.0 micron or 300 to 5000 nanometer and the other smaller polymer particle of 0.05 to 0.3 micron or 50 to 300 nanometer. The examples show the claimed ratio of hollow polymer particle and smaller polymer particle as well as the claimed diameters. Thus, Hoshino et al anticipates or obviously shows the claimed invention.

2. Applicant's election with traverse of the Group I invention in Paper No. 8 is acknowledged. The traversal is on the ground(s) that the claim of Group II depends from the composition of Group I and therefore not an independent invention. This is not found persuasive because the mere fact that a claim is dependent from another claim does not inherently mean that they are related inventions. Distinctness is not based on the mechanical arrangement of the claims, i.e., dependency. The separate and distinct requirement for the purposes of 35USC121 has been stated in the previous Office Action.

The requirement is still deemed proper and is therefore made FINAL.
